github.com/engmenna180-oss | Beheira, Egypt

CAREER OBJECTIVE

Analytical Junior Data Analyst and Information Systems student with practical experience in SQL, Microsoft Excel (PivotTables, Dynamic Dashboarding), and Power BI. Demonstrating proven capabilities in calculating metrics, analyzing sales figures, and transforming raw transactional data into interactive visual dashboards. Dedicated to helping organizations optimize revenue, track key performance indicators (KPIs), and make data-driven business decisions.

EDUCATION

Faculty of Computers and Artificial Intelligence, Sadat City University

Oct 2025 – Present

Bachelor of Science in Information Systems | GPA: 3.32/4.00

TRAINING & PRACTICAL EXPERIENCE

Data Analysis Trainee – DEPI (Digital Egypt Pioneers Initiative)

2026 – Present

- Enrolled in hands-on training covering end-to-end data processing workflows, relational databases, dynamic reporting, and KPI metric design.
- Applying analytical methods in Microsoft Excel and SQL to clean, model, and extract actionable insights from commercial datasets.

Advanced Data Analysis Skills Trainee – ERA Online

2026 – Present

- Participating in practical training focused on Excel, SQL, Power BI, Power Query, and introductory Machine Learning concepts for advanced data modeling.

PROJECTS

Superstore Sales Analytics Dashboard

2026

Tools: Microsoft Excel, Dynamic Slicers, Pivot Tables & Charts, Timeline Filters

- Description:** Built an interactive visual dashboard analyzing global retail sales exceeding \$2.29M in total revenue to track profitability and return rates across regions.
- Calculated key performance metrics including Total Sales (\$2,297,201) and Total Profit (\$286,397), identifying top-performing regional markets.

Bike Sales Performance Dashboard

2026

Tools: Microsoft Excel, Data Modeling, Pivot Charts, Power Query

- Description:** Developed a comprehensive sales performance dashboard evaluating \$1.40M+ in revenue across product categories, bike colors, and customer demographics.
- Analyzed revenue versus profit distributions across sub-categories and customer gender classifications using Power Query and Data Modeling.

MimicBot – Motion-Capture Robotic Arm

2026

Tools: Arduino Uno, Microcontrollers, C++, Servo Motors & Sensor Tracking

- Description:** Designed and programmed an embedded robotics system using Arduino Uno microcontrollers to track motion angles and mirror movements in real time.

CERTIFICATIONS

Data Fundamentals – IBM SkillsBuild

Aug 2026

[Credential Verification](#)

AI for You Certification – Oracle

2026

CHAMPIONSHIPS & COMPETITIONS

Competitive Programming Contestant – ECPC (Egyptian Colleges Programming Contest)

Aug 2026

- Solved complex algorithmic and mathematical problems under strict time constraints using C++ and core Data Structures in official collegiate programming contests.

TECHNICAL SKILLS

- Data Analysis & BI:** Microsoft Excel (Advanced Formulas, PivotTables, Dynamic Slicers, Power Query), Power BI, Data Modeling, KPI Dashboard Design
- Databases & Querying:** Structured Query Language (SQL), MySQL, Relational Database Queries, Data Cleaning & Formatting
- Programming Languages & Embedded Systems:** C++ (Proficient), Python (Basic), Arduino Uno Microcontrollers
- Tools & Concepts:** Git & GitHub, Problem Solving, Data Structures, Algorithmic Thinking

LANGUAGES

- English:** Intermediate (B1)
